Horticultural Requisites, etc.

New York, January, 1904.

In submitting our Catalogue for 1904, we take this opportunity of again thanking our numerous friends and customers for their liberal support and recommendations. From those who have not hitherto favored us with their orders, we would respectfully solicit a trial, which we believe will lead to increased confidence and an extension of business. We assure them that all orders intrusted to our care, either large or small, will receive our prompt and personal attention.

To meet the growing demand for our reliable seeds, we have had to still further increase our facilities for filling orders, and we are now in a position to fill all orders same day as received. As heretofore, we have been able to secure our supply of Vegetable and Flower Seeds from the most reliable growers, and, to still further guard against the possibility of failure, we have the Germination of our seeds carefully tested before sending them out.

Register of Gardeners and Farmers.

We have at all times upon our Register the names of competent men, qualified either to fill the situation of Head Gardener, Under Gardener, or Farm Manager. Ladies and Gentlemen requiring help in the above capacity will please send particulars, when we will be pleased to make selections for the different requirements and answer all correspondents.

About Warranting Seeds.

Weeber & Don give no warranty, express or implied, as to description, quality, productiveness or any other matter of any seeds, bulbs or plants they send out, and they will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms, they are at once to be returned.—W. & D.

The quality is improved very much by blowing, which can be easily done by covering over the plants with boards.

MUSHEROON SPANW.

German, Champignon.—French, Champignon.—Spanish, Seta.

Ten pounds will spawn 10 feet square.

The Mushroom is one of the most profitable crops grown, especially in the vicinity of large cities, where the demand, at all seasons, is far in excess of the supply. Its cultivation may be carried on successfully in a cellar or shed during winter, or in the open air in summer.

CULTURAL DIRECTIONS:—Collect sufficient fresh horse droppings to form the desired size of bed, spreading them out in an airy shed to dry, and turning them frequently. When in a proper state as to dryness, which will soon be learnt by experience, make three into a bed from nine inches to one foot thick, bearing them firmly together. If the droppings have been properly prepared, gentle fermentation will soon commence, and when the temperature of the bed is from 75° to 80°, with no danger of it rising higher, put the spawn in. This is done by making shallow holes about nine inches apart, inserting pieces of spawn about the size of a hen's egg and covering with the dung, pressing this closely about the spawn. It is of the greatest importance that the temperature of the bed should not decline below 72°, nor rise above 80° for a month after spawning. Within a fortnight after putting in the spawn, cover the bed about two inches thick with good, mellow, moist soil, making this firm; and if under this a covering of one or two inches thick of cow dung, in about the same state as to moisture as the soil, can be afforded, this will cause the bed to last longer, and also to produce a larger crop than if covered with soil only. The most suitable temperature for beds in bearing is 50° to 55° and as a high temperature causes the mushrooms to come small, this should be avoided. Watering beds in bearing often causes the small mushrooms to dump off; therefore, water only when the bed ceases to be productive, and then use the water about the same temperature as the bed.

POTATOES.

German, Kartoffel.—French, Pomme de Terre.—Spanish, Patata.

Ten bushels cut tubers will plant one acre.

Our seed Potatoes are not the small tubers riddled from large bulk stock, as are often sold for seed purposes, but Northern grown, free from disease, and have been several times inspected during growth by ourselves. It is our aim to have true, pure tubers, yielding heavy crops, immune from disease, and, above all, excellent flavor and quality when cooked. These are the chief points to be found in the sorts here listed.

The Potato, like all robust-growing vegetables, can be grown with varying success on soils of all kinds and in all conditions of fertility, but the soil best suited to it is a sandy loam. In breaking up good pasture land, the decaying sod answers sufficiently well for potatoes the first year in lieu of manure. Manure is applied either in rows or hills, or broadcast over the hills and ploughed in—the latter in most cases being preferable. In highly enriched soils the plants are more liable to disease than when grown in soil that is naturally good. Plant as early in spring as the ground can be had in fair working order, in hills or ridges, about two feet apart, cover lightly with soil, about four inches deep.

TOMATO.

German, Liebesapfel.—French, Tomato.—Spanish, Tomate.

One ounce will produce 1,300 plants.

This delicious vegetable is one of the most important of all garden products. The seed should be sown in a hot-bed about the first week in March, in drills five inches apart, and half an inch deep. When the plants are about two inches high, they should be set out four or five inches apart in another hot-bed, or removed into small pots, allowing a single plant to a pot. About the middle of May the plants may be set out in the open ground. Sufficient plants for a small garden may be started by sowing a few seeds in a shallow box or flower-pot, and placing it in a sunny window of the room or kitchen.

Best of All Forcing. We especially recommend this Tomato as one of the finest of recent introductions. It sets freely, fruiting low down and all up the stem, dwarf habit, and very prolific. For forcing it is unequalled: fruit of good size, and so solid that very little seed is produced. Color, deep scarlet. Per pkt., 10 cts.; oz., $1.00; lb., $5.00.

"CRIMOIRE SELECTED FORCING." A splendid new variety for forcing. Fruit good size, deep bright red color, shape round and smooth, flesh solid, and exquisite flavor. Per pkt., 15 cts.

In the past few years the sweet pea has become one of the most popular flowers. In making the following selection we have endeavored to include only the largest flowering and most distinct sorts.

Recently there have appeared many new varieties, some exquisite in form and color, others being merely renamed, duplicates of the older kinds.

The collection we now offer contains only the most popular and desirable flowers.

We call special attention to our mixture at $1.00 per pound, which is blended from our named varieties, comprising only the choicest colors.

Although we do not list either the Cupid or Double Sweet Peas, we can supply these with several other discarded varieties not in the following list, and can fill orders for any variety or quantity.
